WHAT THIS IS AND IS NOT

This record shows what each Windows or Linux machine reported about itself to BOBcloud Monitor, with the date and time each reading was received by the server. It covers the technical controls Cyber Essentials assesses on those machines. It is not a certification, and it is not an assessment. It does not cover multi-factor authentication or cloud services, routers and firewalls at the network boundary, mobile devices, or any machine without the agent installed. Readings are self-reported by each machine. Entries are appended and cannot be edited or removed. Where a machine reports that a drive is encrypted and a recovery key protector exists, that is what the machine says about itself: it is not confirmation that a key escrowed to Active Directory or Entra can actually be retrieved.
